

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended): A film covered device including an electric device element having a collector formed by collectively joining anode plates or cathode plates that is extended from a lamination area in which the anode plates and the cathode plates are opposite each other and laminated, and an enclosing film in which at least a heat-seal resin layer and a metal layer are laminated, a battery element that is surrounded in a manner such that said heat-sealing resin layer is inside, and a peripheral junction portion that is heat-sealed to seal said battery element and an electrolytic solution, the film covered device comprising:

a member in the form of a bag for tightly covering at least a corner of said collector; and  
a tab that is connected to said collector and extends from said enclosing film;  
wherein said member in the form of a bag is formed with an insertion hole for allowing  
said tab to be inserted thereinto.

2. (canceled).

3. (original): The film covered electric device according to Claim 1, wherein said member in the form of a bag is a resin-made film.

4. (currently amended): The film covered electric device according to Claim [[2]]1, wherein said member in the form of a bag is formed by adhering two films together.

5. (currently amended): The film covered electric device according to Claim [[2]]1, wherein said member in the form of a bag is made of an inflation film.

6. (currently amended): A collector covering member for a film covered electric device including an electric device element having a collector formed by collectively joining anode plates or cathode plates that is extended from a lamination area in which the anode plates and the cathode plates are opposite to each other and laminated, and an enclosing film in which at least a heat-seal resin layer and a metal layer are laminated, a battery element that is surrounded in a manner such that said heat-sealing resin layer is inside and a peripheral junction portion that is heat-sealed to seal said battery element and an electrolytic solution:

wherein the collector covering member is said member in the form of a bag for tightly covering at least a corner of said collector, and is formed with an opening portion for allowing a tab that is connected to said collector and is extended from said enclosing film, to be inserted thereinto.

7. (canceled).

8. (currently amended): The collector covering member according to Claim [[7]]6 is a resin-made film.

9. (original): The collector covering member according to Claim 8 formed by adhering two films together.

10. (original): The collector covering member according to Claim 8 made of an inflation film.
